

Cyber Security - Cyber Security Communication Strategy

Overview

Communication between the APM Cyber Security Team, other internal D&T Teams, end users and Business stakeholders is a continuous and two-way process. Unless explicitly specified, a range of communication methods will be utilised to disseminate information to relevant parties, including, but not limited to: Email, Microsoft Teams, SMS, Telephony, Website articles and Automated data feeds.

Unless otherwise specified within this strategy, it will be the responsibility of the relevant business unit/contract holder to communicate with their key stakeholders with regards to APM ISMS in line with our ISO 27001 strategy. With the Cyber team being engaged from external stakeholders through our APM business contact methods or the external feedback process maintained by Employment Services.

Major Cyber Security Incidents

Information on relevant major security incidents such as a sustained cyber-attack are communicated to APM employees. Multiple channels are utilised including, but not limited to email, Microsoft Teams and SMS notification.

Periodic Cyber Security communications

Communications are sent via email on a periodic basis to remind APM staff on security topics such as phishing and password hygiene.

Knowledge Sharing

Regular Knowledge sharing occurs between APM Cyber Security team and other D&T teams.

- This is achieved via monthly Ask Me Anything (AMA) sessions hosted by the Cyber Security team and open to all APM D&T staff.
- Learnings from Penetration Tests conducted against APM are shared with all relevant D&T teams.

External Breach Notifications

APM Cyber Security monitor external sources for 3rd party data breaches which may contain APM user's data. Users are notified via email of any known data breaches which contain their details.

Threat Intelligence

Actionable Threat Intelligence generated by the Cyber Security Team or external SOC provider is provided to D&T Leaders.

Industry Benchmarking

Benchmarking where available, is provided to business leaders. This may be in areas such as Phishing Simulation – i.e. click rate percentage for APM users compared to industry peers.
